

Sandia/California's 50th Anniversary Sandia Day

Sandia/California held its 50th anniversary Sandia Day on Saturday, Sept. 20, with a VIP Tour the day before. Some 2,000 Sandians, families, and friends showed up for the open house. Featured exhibits included the nuclear weapons and transport containers Sandia has designed for the stockpile, the Extreme Ultraviolet Lithography (EUVL) joint venture, the Visualization Design Center, multi-fuel combustor laboratory, global demilitarization of obsolete munitions, ARM-UAV Altus aircraft from General Atomics, Nike Hercules Missile from Fort Barry in the Marin headlands, Chemical and Radiation Detection Lab's CZT radiation sensors, plus several corporate exhibits from New Mexico highlighting 50 years of "Exceptional Service in the National Interest."

Sandia *CaliforniaNews*

ALTUS Unmanned Aerospace Vehicle from General Atomics that Sandia used in global climate cloud studies over Oklahoma was a popular display, complete with the command and control center in a large trailer where kids could manipulate the antenna and use the video camera to follow people onscreen nearby.
